FUNDAMENTALS OF OPTIMIZATION

Introduction

CONTENT

- Optimization problems
- Optimization problem classification
- Applications
- Topics

Optimization problems

- Maximize or minimize some function relative to some set (range of choices)
- The function represents the quality of the choice, indicating which is the “best”
- Example
  - A shipper need to find the shortest route to deliver packages to customers 1, 2, …, N

0	3	1	6
3	0	2	4
1	2	0	5
6	4	5	0

0	3	4	2	5	6	8	7
3	0	3	6	7	2	1	6
4	3	0	4	7	1	1	9
2	6	4	0	2	8	3	4
5	7	7	2	0	6	5	1
6	8	1	8	6	0	9	3
8	1	1	3	5	9	0	2
7	6	9	4	1	3	2	0

Notations

- $x \in R^n$: vector of decision variables x_j, $j = 1, 2, \ldots, n$
- $f : R^n \rightarrow R$ is the objective function
- $g_i : R^n \rightarrow R$ is the constraint function defining restriction on x, $i = 1, 2, \ldots, m$

minimize $f(x)$ over $x = (x_1, x_2, \ldots, x_n) \in X \subset R^n$ satisfying a property P:

$$g_i(\mathrm{x}) \leq b_i,\ i = 1, 2, \ldots, s$$
$$g_i(\mathrm{x}) = d_i,\ i = s + 1, 2, \ldots, m$$

Examples

$$\min f(x) = 3x_1 - 5x_2 + 10x_3$$
$$x_1 + x_2 + x_3 \le 10$$
$$2x_1 + 4x_2 - 5x_3 = 9 \qquad \text{(Linear Program)}$$
$$x_1, x_2 \in R^+, x_3 \in Z$$

$$\min f(x) = 4x_1^2 + 3x_2^2 - 7x_1 x_3$$
$$x_1 + x_2^3 + 4x_3 \le 10$$
$$2x_1^2 + 4x_2 - 5x_3 = 7 \qquad \text{(Nonlinear Program)}$$
$$x_1, x_2 \in R^+, x_3 \in Z$$

Solving optimization problems

- General optimization problems
  - Very difficult to solve
- Some special cases
  - Linear programming
  - Least square problem
  - Some shortest path problems on networks
  - Etc.
- Example TSP

0	3	1	6
3	0	2	4
1	2	0	5
6	4	5	0

0	3	4	2	5	6	8	7
3	0	3	6	7	2	1	6
4	3	0	4	7	1	1	9
2	6	4	0	2	8	3	4
5	7	7	2	0	6	5	1
6	8	1	8	6	0	9	3
8	1	1	3	5	9	0	2
7	6	9	4	1	3	2	0

Classification

- Linear Programming (LP): f and g_i are linear
- Nonlinear Programming (NLP): some function f, g_i are nonlinear
- Continuous optimization: f and g_i are continuous on an open set containing X, X is closed and convex
- Integer Programming (IP): $X \subseteq \{0,1\}^n$ or $X \subseteq Z^n$
- Constrained optimization: $m > 0$, $X \subset R^n$
- Unconstrained optimization: $m = 0$, $X = R^n$

Applications

- Production Planning
- Routing in transportation
- Scheduling
- Assignment
- Packing
- Time Tabling
- Network designs
- Machine learning
- . . .

Topics of the course

- Unconstrained convex optimization
- Constrained convex optimization
- Linear programming
- Linear integer programming
- Constraint Programming
- Modelling
- Heuristic methods
